

O9 SOLUTIONS		SENIOR DATA SCIENTIST	NOV 2025-PRESENT
DEMAND FORECASTING	- Delivered ~28% average forecast accuracy improvement across 150+ brands for a large US-based consumer products manufacturer by architecting iterative forecast releases using ensemble methods (Prophet, SARIMA, LightGBM) and demand normalization to neutralize regulatory and supply disruption noise. - Designed a Claude based internal knowledge assistant, by using a curated domain corpus (o9 platform docs, IBPL queries, forecasting use cases) cutting new user ramp-up time and enabling self-serve troubleshooting for 80%+ of common platform issues. - Drove cross-functional forecasting workstreams end-to-end aligning supply planning, commercial, and data science stakeholders on requirements and delivery milestones, mentoring junior team members, and ensuring consistent forecast adoption across business units.		
SIGMOID		ASSOCIATE LEAD DATA SCIENTIST	FEB 2021-OCT 2025
Q&A BOT	- Led cross-functional teams in delivering an enterprise-grade GenAI chatbot, overseeing design, development, and deployment of OCR, document classification, and summarization pipelines. - Optimized RAG-based architectures by architecting open-source OCR workflows (saving ~\$55K in LLM costs), integrating Vision Transformers, and fine-tuning Hugging Face models for document intelligence. - Enhanced model quality & user experience through systematic evaluation frameworks, output optimization, and iterative A/B testing, improving agent response accuracy and end-user satisfaction by 15%.		
DEMAND FORECASTING	- Directed the design & deployment of enterprise-grade forecasting systems, integrating Prophet, LSTM, XGBoost, & ARIMA to deliver real-time demand predictions for 70+ pharmaceutical products across US & Japan. - Set new benchmarks in predictive accuracy, architecting custom loss functions, ensembling frameworks, & rigorous evaluation protocols that consistently outperformed Amazon Forecast by 10–30% across confidence intervals. - Pioneered feature innovation at scale, leading the integration of 30+ exogenous signals (macroeconomic, demographic, & climate data) via automated data pipelines, advancing the organization's capability in causal modeling & external factor simulation.		
BRAND MATCHING	- Led the transformation of brand identification in product reviews by replacing manual hand-matching with a custom CNN-based model, achieving 93% accuracy in top-3 brand recognition & significantly reducing time & error.. - Established rigorous baselines using distance-based similarity metrics (Jaccard, Cosine, Record Linkage), uncovering patterns in matching behavior & providing a robust framework for model comparison. - Advanced NLP model development by experimenting with multiple architectures & embedding strategies (word & character-level), & institutionalized a benchmarking pipeline to evaluate & optimize performance.		
SUPPLY CHAIN OPTIMIZATION	- Designed & deployed an optimization framework to consolidate Less-Than-Truckload (LTL) shipments into Full Truckloads (FTL) over configurable time horizons, optimizing for trade term benefits, carbon emissions, & shipment costs using Mixed Integer Linear Programming. - Built a custom decision-support tool from scratch using PyShiny, including an opportunity calculator to quantify business & sustainability gains from consolidation strategies. - Directed end-to-end data integration workflows, ensuring seamless ingestion from Snowflake into the Posit environment for scalable, production-ready optimization pipelines.		
D2C ANALYTICS	- Developed advanced predictive models (classification, regression, binning) to forecast sales of ~600 products (>\$50M revenue), achieving ~20% MAPE & uncovering actionable consumer behavior insights. - Designed media mix simulations to quantify the impact of channel variables on AOV, traffic, & conversions, enabling data-driven growth strategies for a major CPG client. - Led feature optimization & market strategy analytics, reducing ~150 features to 60 key drivers with statistical tests & SHAP analysis, & applying association rule mining to refine bundling & discount strategies.		
CAMPAIGN OPTIMIZATION	- Optimized ~100 Amazon ad campaigns (SP, SB, SD) by modeling relationships between ROAS, CPC, & bid prices, delivering a ~15% revenue uplift through pruning underperformers, & adding high-performing new terms. - Engineered a scalable keyword ranking system for 500+ terms using NLP (BM25, embeddings), tree-based models, & competitor analysis, improving product visibility across Amazon, Walmart, & Target marketplaces. - Enhanced product page performance by linking review-derived keywords with competitor titles, driving a ~30% increase in click-through rate, while leveraging cloud/data platforms (AWS, GCP, Databricks, Snowflake).		
BYTESCARE		ASSOCIATE	JUL 2019-JAN 2021
INNOVATION VENTURE	- Scaled a startup, by building products to track piracy & automate copyright infringement reporting. - Led product design & technical architecture, while driving competitor analysis & market intelligence to shape sales, pricing, & revenue strategies. Also, was responsible for building long term client relations. - Developed automation pipelines (Node.js) for email ingestion, classification, & copyright response tracking, improving operational efficiency & client onboarding.		
AWARDS & RECOGNITION			
Bravo Award, SIGMOID for quick learner. Two promotions with each less than a year for continuous outperformance.			
ACADEMIC QUALIFICATIONS			

Degree	Institute	Year
B.Tech	Indian Institute of Technology (BHU), Varanasi	2019
Class XII	KIIT International School, Bhubaneswar	2015
Class X	Delhi Public School, Jamshedpur	2013
